# Notice

## Read First

Thank you for choosing CreatBot 3D printer!

This manual contains important information about the installation, use, maintenance and common problems of CreatBot 3D printer. Please read this manual carefully before using 3D printer. All losses caused by the breach of the notes and the notes and the operation process of the operation process will be borne by the user. Please use the filament provided by CreatBot, or high quality filament by third manufacturers. Due to the use of third party inferior material caused by the failure of the printer, the loss will be borne by the user.

Software running environment, 2G or above processors, at least 1G memory, compatible with Windows, MAC, please use memory as much as possible.

I wish you have fun with CreatBot 3D printer!

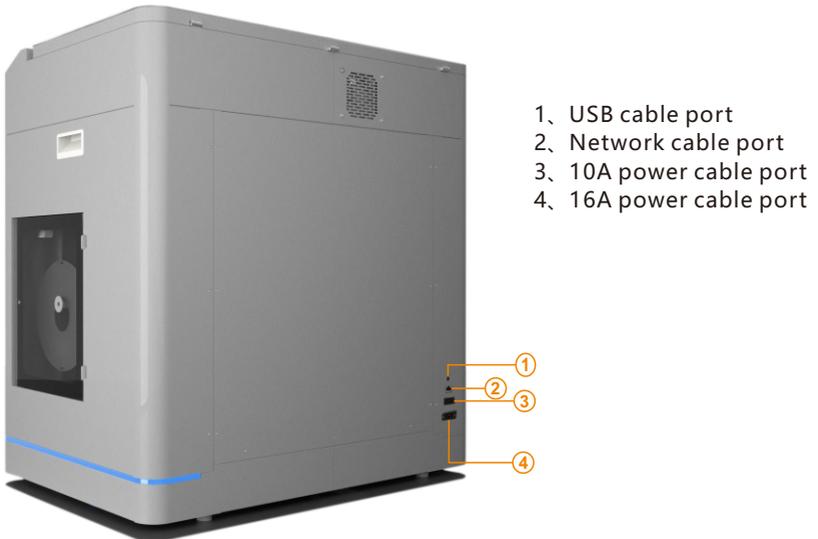

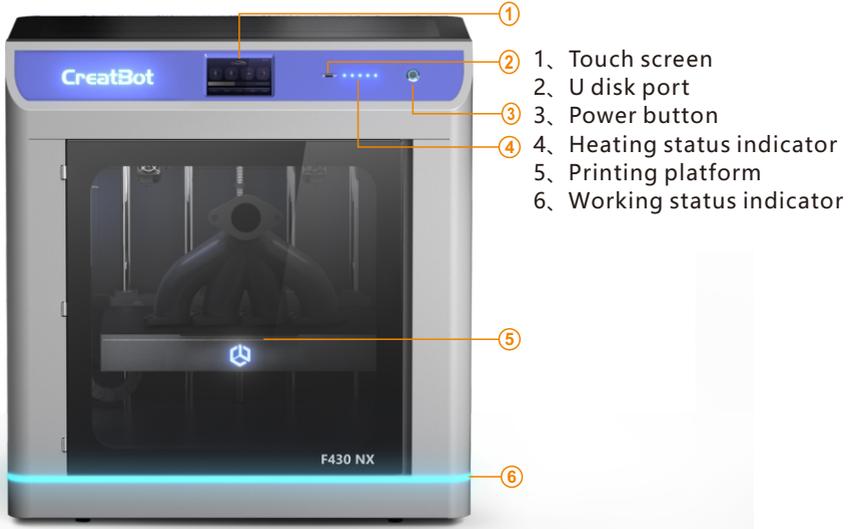

## Danger Warning

-  The nozzle's temperature will reach 300 degrees, don't touch.
-  The platform's temperature will reach 100 degrees, don't touch.
-  Please make sure that the printer connected to the ground.
-  Do not attempt to open the case, be careful of electric shock.

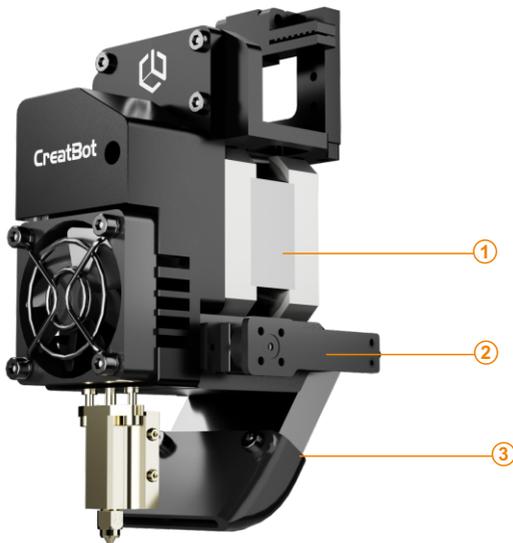

## Working Environment

-  The 3D printer can work in the indoor environment of 5 °C to 30 °C.
-  Long-term not use of the printer, be sure to dust, moisture.
-  Long-term not use of the filament, please be sealed to prevent deterioration.

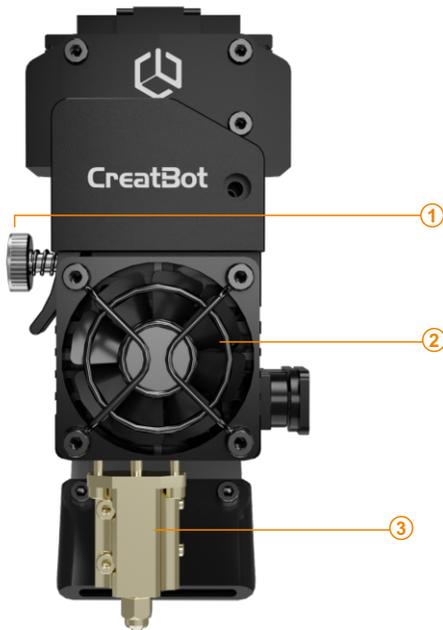

## Printer

## Extruder

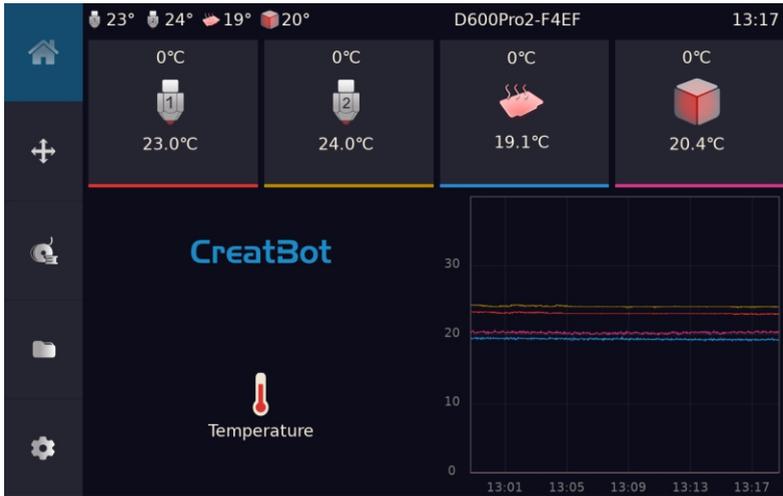

- 1、 Extruder motor
- 2、 Servo
- 3、 Cooling fan

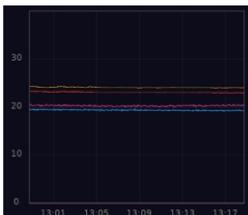

- 1、 Spring and nut
- 2、 Sink fan
- 3、 Hotend( Nozzle+ Heat block)

# Screen operation

## Temperature

 0°C 23.0°C	Touch and set up the temp of left nozzle. 0°C      Preset nozzle temperature 23.0°C    Current nozzle temperature
 0°C 24°C	Touch and set up the temp of right nozzle. 0°C      Preset nozzle temperature 24°C      Current nozzle temperature
 0°C 19.1°C	Touch and set up the temp of bed. 0°C      Preset bed temperature 19.1°C    Current bed temperature
 0°C 20.4°C	Touch and set up the temp of chamber. 0°C      Preset chamber temperature 20.4°C    Current chamber temperature
 Temperature	Click it and select the filament to preheat.

Actual temperature curve

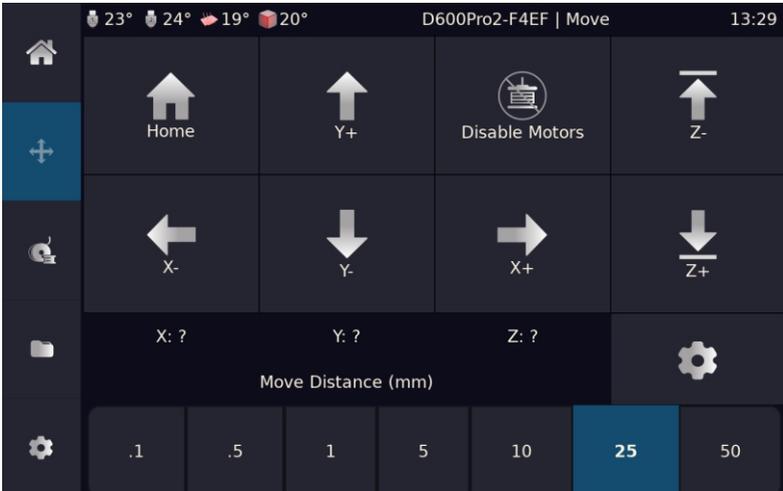

## Screen operation

### Calibrate PID

When the heater cannot maintain a stable target temperature, you can set the target temperature and click this button to perform PID calibration.

### Move

Unlock the motors. After unlocking, you can move the X and Y axes by hand.

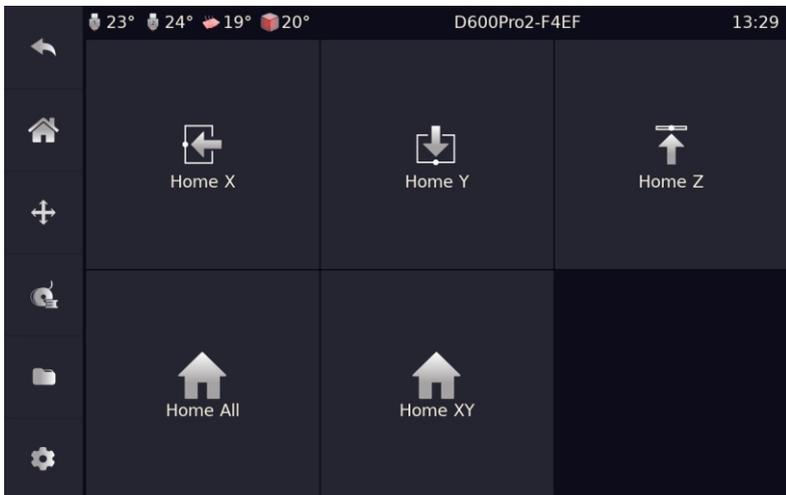

X: ?

Y: ?

Z: ?

The current position of the X/Y/Z axis. "?" means that the current position cannot be obtained and the X/Y/Z axis cannot be moved. You need to run Home first.

## Home

## Screen operation

### Filament

	<p>Click to activate the extruder. Blue means it is activated.</p>
	<p>Select the filament to quickly set the extrusion temperature</p>
	<p>Automatic loading/unloading filament</p>

Extrude and retract filament according to set length/speed

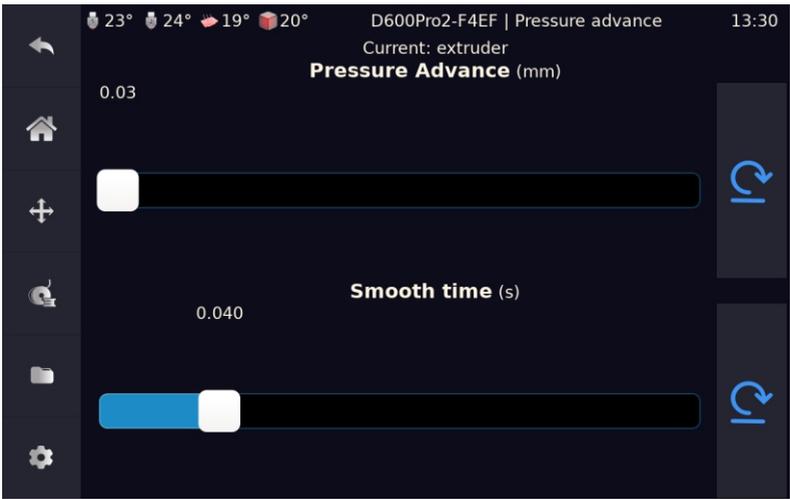

Set the length and speed of extruding/retracting filament

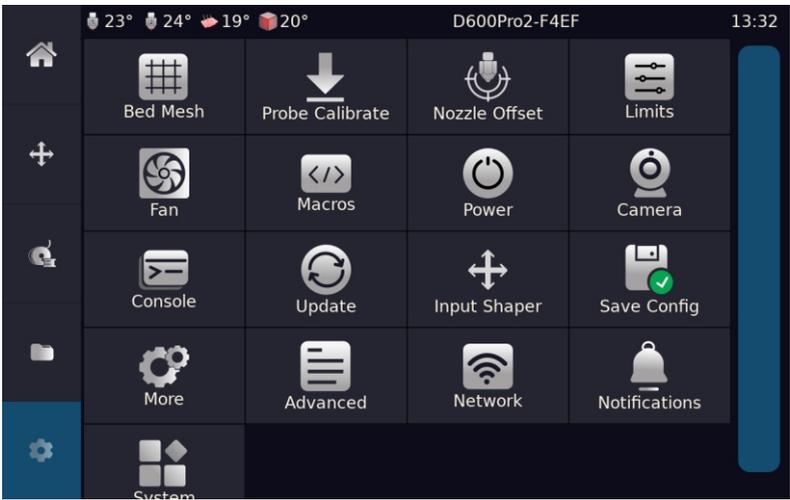

Detect the current filament status. Click the button to turn off the filament detection function.

## Pressure Advance

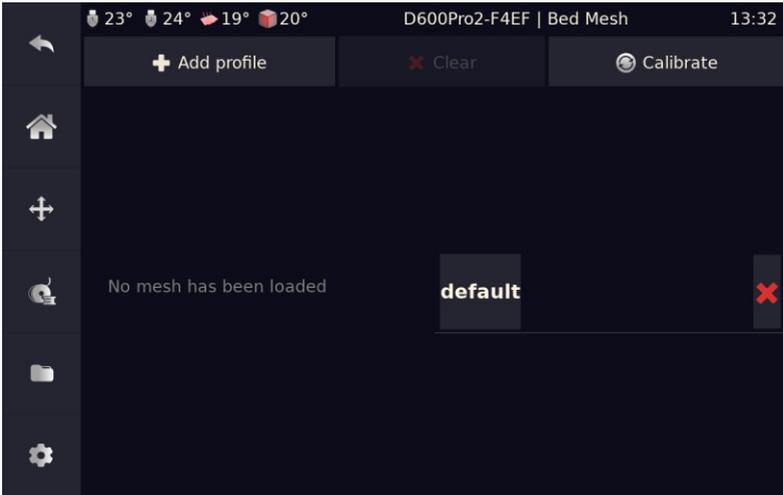

Pressure advance: ensure that the line extruded at different speeds is uniform. It is related to the filament, nozzle size, hot end temperature, and extruder.

## Settings

## Screen operation

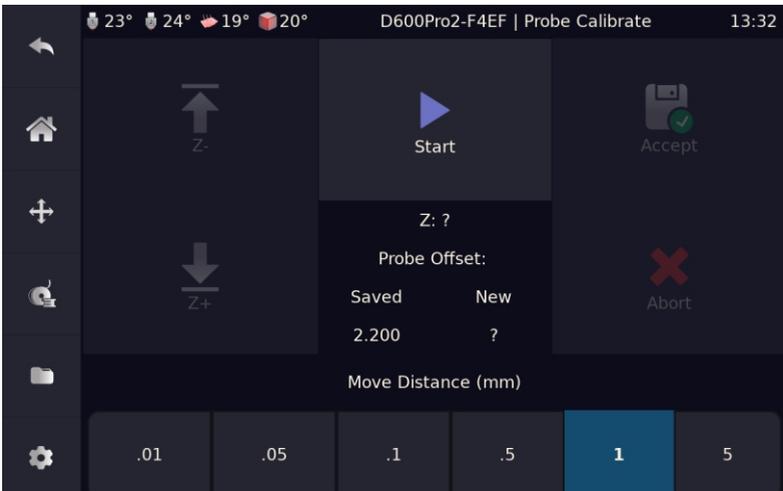

### Bed Mesh

Click Calibrate to run automatic leveling.

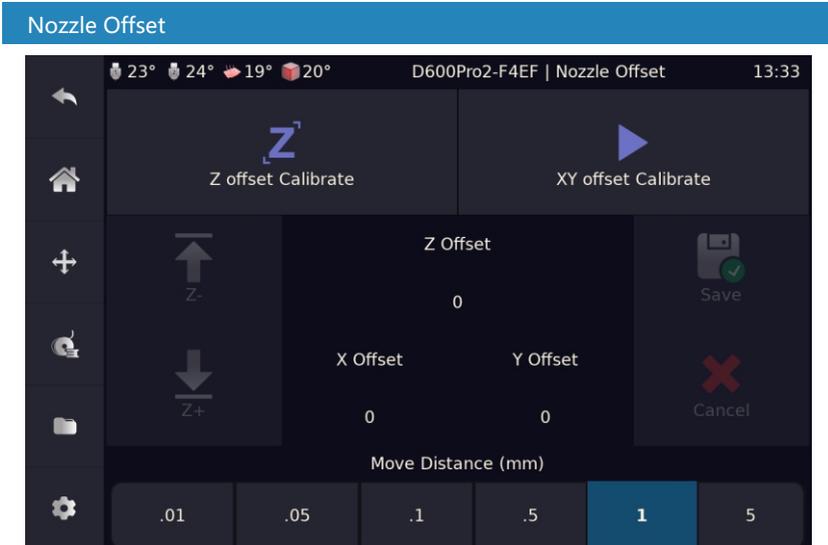

Click the configuration name to view the current detection data.

### Probe Calibrate

Used to calibrate the height difference between nozzle 1 and the Z sensor. See Leveling Video to set this value.

If the model does not stick well to the platform during printing, the nozzle is too close or too far from the platform and this value needs to be recalibrated.

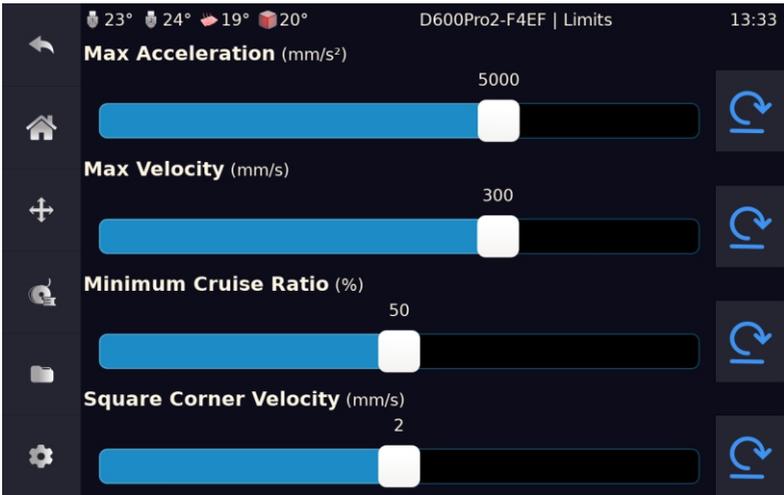

The offset value of nozzle 2 relative to nozzle 1. Calibrate the Z offset value first. Then calibrate the XY offset value. After replacing the nozzle or hot end, you need to recalibrate this value.

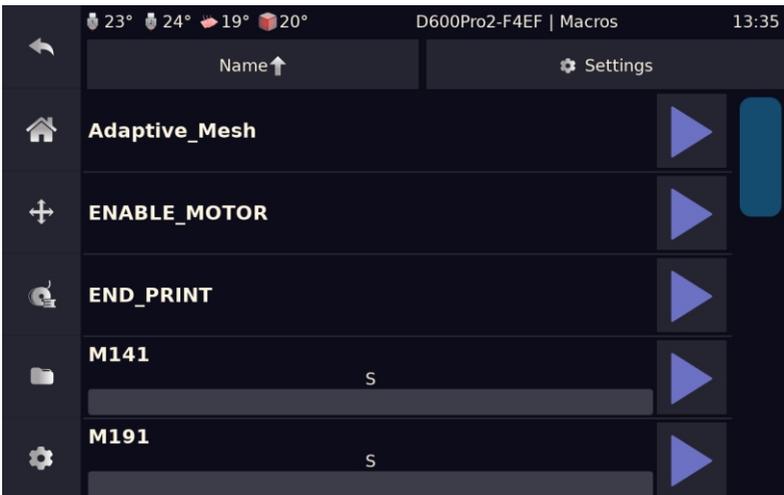

## Screen operation

### Limits

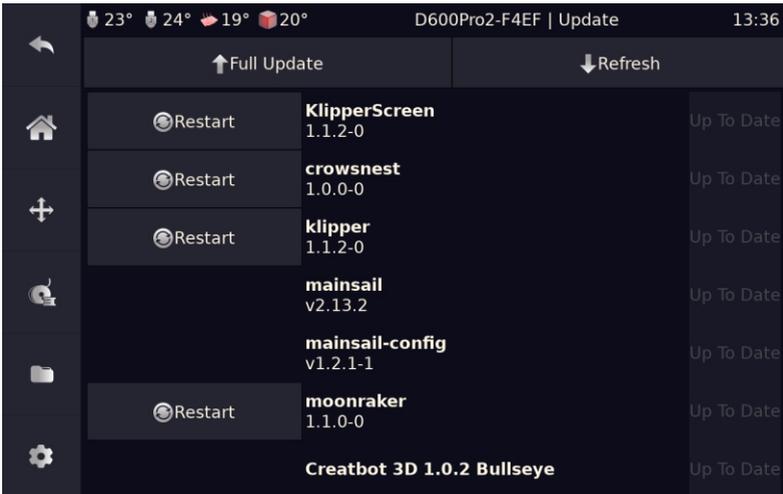

### Macros

ENABLE\_MOTOR

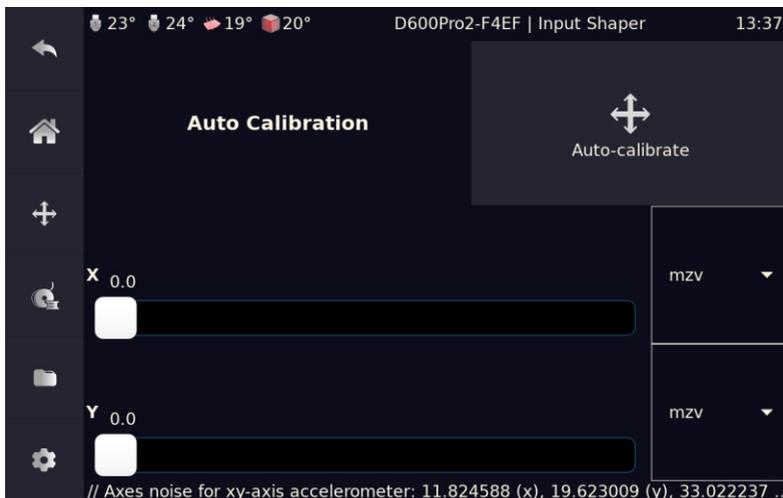

When the machine X/Y/Z cannot move (because there is no coordinate value), and Home cannot be run, this setting can be used. It will set false coordinate values to facilitate moving the X/Y/Z axis.

## Update

Includes updates for the screen, firmware, and plug-ins. You need to connect the printer to the network first, click Refresh to see if there is anything that can be updated, then click Update to complete the update. When you receive new printer, you can connect to the network to see if there is anything that can be updated.

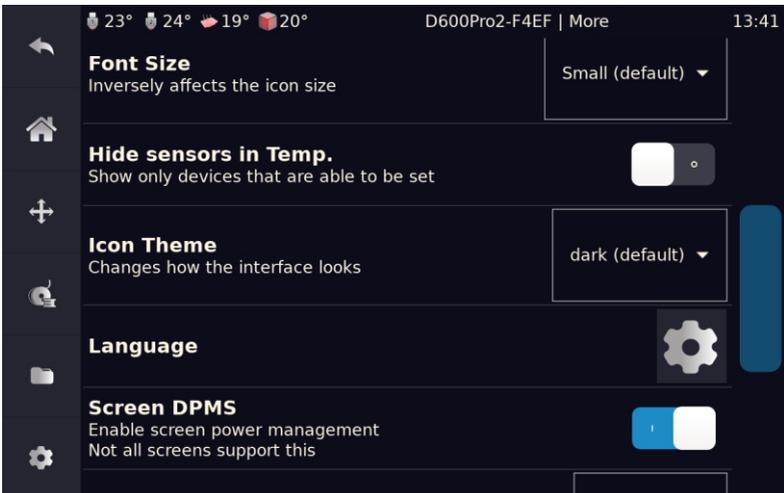

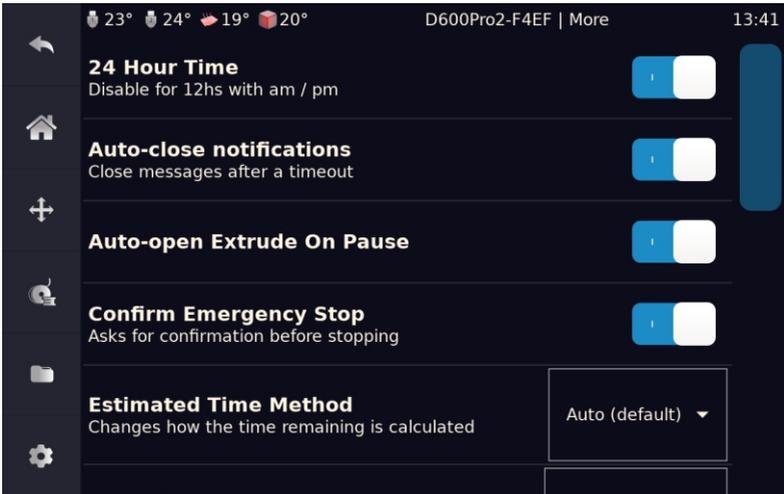

## Input Shaper

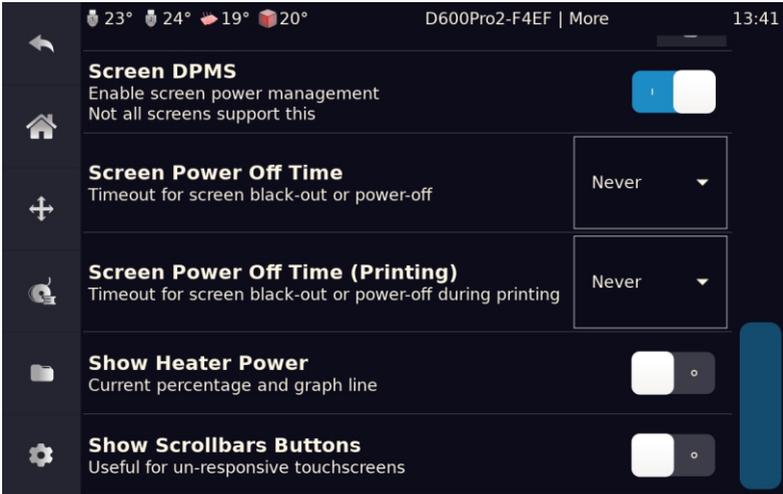

## Screen operation

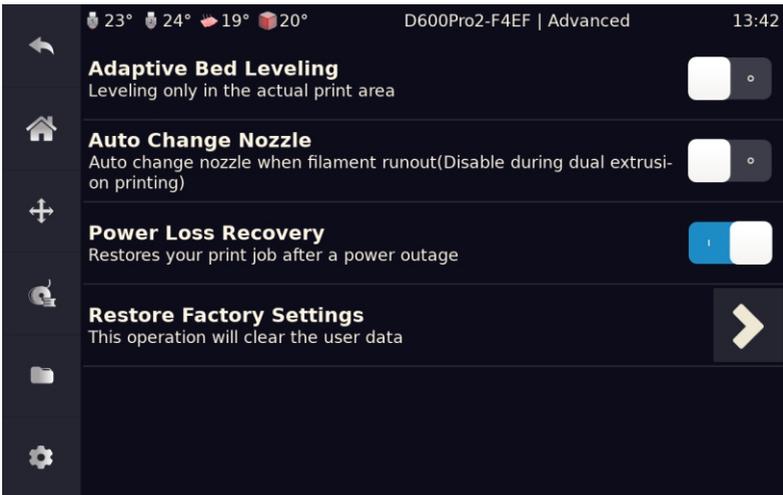

The machine has been calibrated before leaving the factory. Click Auto Calibrate to recalibrate the resonance compensation values of the X and Y axes.

### More

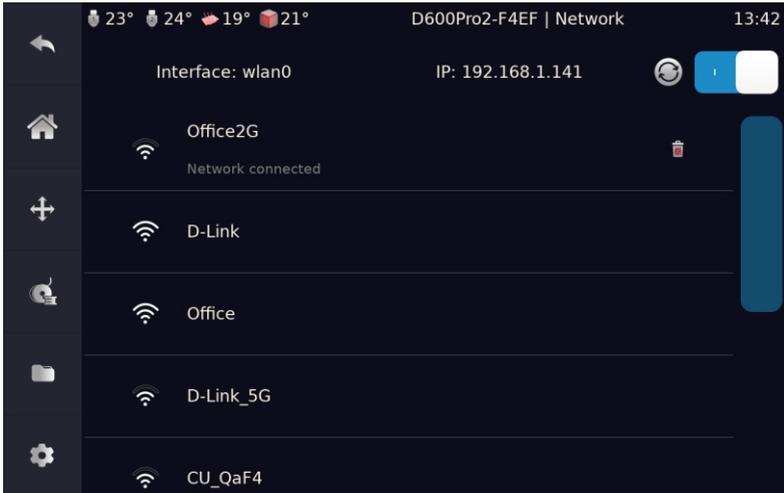

## Advanced

## Screen operation

### Network

Printing can be controlled on the web page. Enter the printer IP in the browser to access the web page.
